

Medical Disclaimer

This Pregnancy Risk Assessment Tool is intended solely for general informational and educational purposes and is based on limited information voluntarily provided by the user. The assessment generated by this tool is a preliminary, surface-level evaluation and does not constitute a medical diagnosis, clinical opinion, treatment plan, prescription, or substitute for professional medical advice.

Every pregnancy is unique. Even pregnancies currently categorized as “low risk” may develop complications or become medically complex depending on evolving maternal, fetal, genetic, environmental, or clinical factors. Similarly, no two pregnancies, medical histories, or patient outcomes are identical. Risk levels may change over time and require continuous medical supervision and evaluation.

Users are strongly advised not to start, stop, alter, or rely upon any medication, supplement, treatment, lifestyle modification, or medical decision based solely on the results of this assessment without consulting a qualified Obstetrician & Gynecologist (OB-GYN), physician, fetal medicine specialist, or other licensed healthcare professional.

This tool does not replace in-person medical consultation, physical examination, diagnostic investigations, laboratory testing, ultrasound evaluation, emergency assessment, or individualized clinical judgment by a healthcare provider.

While reasonable efforts have been made to design this tool using medically informed logic and healthcare guidance, BirthRight by Rainbow Hospitals, its parent entities, affiliates, doctors, employees, consultants, technology partners, and representatives make no warranties or representations, express or implied, regarding the accuracy, completeness, reliability, suitability, or applicability of the assessment results for any individual user or medical condition.

By using this assessment tool, the user acknowledges and agrees that:

- The results are indicative and non-diagnostic in nature.
- The assessment may not account for all medical, genetic, obstetric, lifestyle, or unforeseen risk factors.
- Medical conditions and pregnancy outcomes can evolve rapidly and unpredictably.

- Clinical consultation with a qualified healthcare professional remains essential for accurate diagnosis, treatment planning, and pregnancy management.

If you are pregnant, planning pregnancy, undergoing fertility treatment, experiencing symptoms, or have any pre-existing medical condition, we strongly recommend consulting a qualified gynecologist or physician for comprehensive evaluation and personalized medical guidance.

In case of any emergency, severe symptoms, or urgent medical concern, please seek immediate medical attention or contact emergency healthcare services.
